Email: sales@larmerbrown.com

Course Objectives

Designed for Developers that have a working knowledge of UPK, or have already undertaken our Basics Training, this course covers the more advanced features and functions of the UPK Developer as well as using the Knowledge Center to deploy content.

The exact objectives of this training are dependent on the learning requirements of the delegate. The content within this outline relates to features and functions within UPK Version 12.1 ESP 4, but can be adapted to suit earlier versions of UPK if required.

Delegates receive three months telephone support on all features and functions covered during the course.

Course Delivery

The course can be delivered in the classroom (one day), or divided into smaller, bite-sized lessons (8 hours in total) and delivered as facilitated online learning.

When delivered as online learning, delegates have access to an experienced UPK Instructor throughout the training. The Instructor provides an overview of specific features at the beginning of each session and then delegates are given hands-on tasks to complete in their own UPK environment*.

Further Learning

For those that are already familiar with UPK but require some refresher training, or perhaps wish to enhance their skills further, we also offer three short online workshops: UPK Masterclass; UPK Refresher and UPK Lead Developer.

Further information can be found in the [UPK section](#) of our website.

UPK Developer Advanced Training

Testing	<ul style="list-style-type: none">• Test It! Mode
Knowledge Center	<ul style="list-style-type: none">• Overview of Knowledge Paths• Creating Knowledge Paths• Track Questions and Assessments• Personalised Content

Technical Prerequisites

It is assumed that delegates are able to complete the hands-on tasks assigned to them as part of this course using their own UPK environment, and that this environment is suitable to complete all aspects of their course assignments. If the delegate does not have access to a UPK environment that is required for a particular session within the course, or for the duration of the course, a Larmer Brown UPK environment can be provided for training purposes, but at an additional cost.

All course materials will be provided to delegates in PDF format, together with the pre-created files, prior to the commencement of the course.

About Larmer Brown

Larmer Brown's primary business objective is to help organisations realise the desired business benefit from their software applications, through the implementation of content development and training delivery programs. We have been working with Oracle's User Productivity Kit (UPK) since 1994.
