

Opus Powered by Epilogue

Digital Adoption Process

Enterprise Digital Adoption Solution

Opus® is a cloud-based Digital Adoption Solution that provides user support content throughout the entire lifecycle of your IT Project - from initial project planning through to onboarding new users, supporting existing users, as well as any future changes and system upgrades.

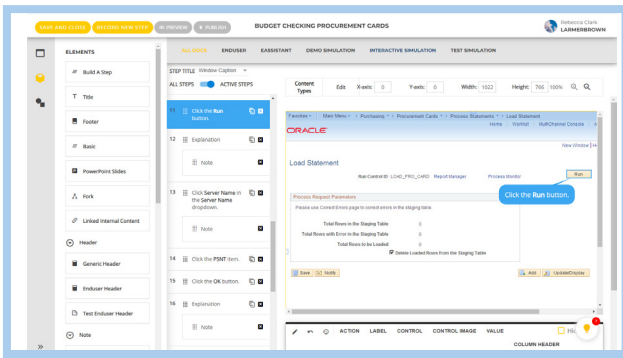

Opus was designed and built with enterprise-level applications in mind, supporting adoption of all applications (including Oracle, SAP, Workday, Microsoft). With the Opus workflow engine, you can easily manage Author progress through the recording, editing, reviewing, and publishing of content, no matter the size and scale of the enterprise application.

Your subject matter experts can quickly and simply document processes using Opus, by executing them in the enterprise application as they normally would. Opus records the steps and uses the power of its cloud-based algorithms to automatically generate target editable assets (including Job Aids, Demo and Interactive Simulations, User Acceptance Test Scripts, Self-Assessments, and Tin Can/xAPI and SCORM compliant outputs), without the need for IT intervention to create custom code for each application.

Create Digital Content Easily

Experience fast and seamless content creation for pre and post go-live activities. Automatically generate content for eLearning, user manuals, assessments, job aids and simulations.

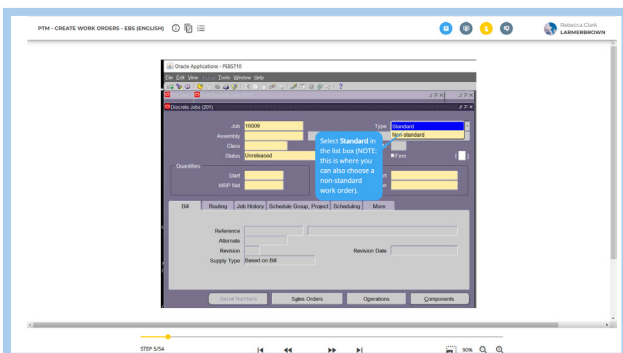

- Easy drag and drop editor to add insights, to improve knowledge transfer
- Automatically generate multiple outputs for in-application guidance, training, assessment, User Acceptance Testing and compliance
- Perfect for use by subject matter experts - no training required to record task execution
- Built for the enterprise – quick to execute and scales to any volume of documentation needed

Drive End User Engagement

By offering in-application training and support, you can decrease time to adoption as your users can directly practice within the application as they work

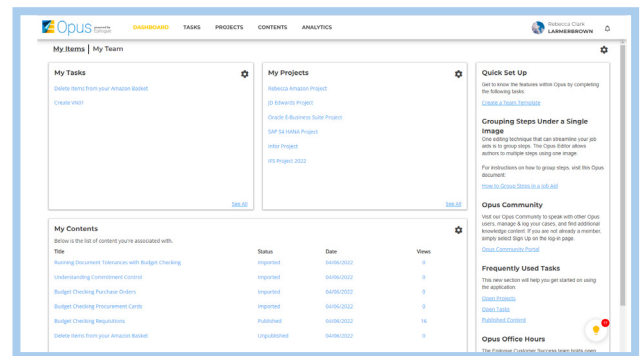

- Support users in-application, increasing satisfaction and productivity
- Reduce time to adoption and competency
- Reduce support calls and peer disruption

Manage Workflow and Collaboration

By optimising communication, Opus enables collaboration between teams at every stage of the digital adoption process

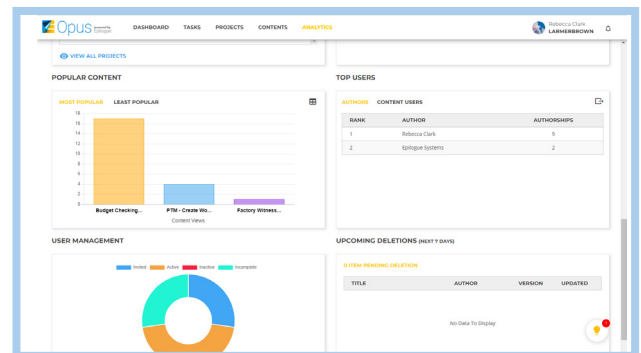

- Workflow, Project/Task and Content Management for creating, reviewing, approving and maintaining content
- Create and enable standards for content look and feel
- Edit and update flow through to existing content
- Opus Dashboard gives “air traffic control” view of workflow and activity

Track and Report Learning Effectiveness

To track the effectiveness of your learning content, Opus provides valuable insights into end user behaviour

- Track workflow and project/task status
- Track utilisation
- Monitor content aging
- Assemble learning performance data (xAPI)

Why Choose Opus as your Digital Adoption Solution?

Improve User Adoption

Make applications easier to navigate and use effectively by deploying intelligent, embedded support across your entire application ecosystem.

Enhance User Proficiency

Increase knowledge retention by guiding users through complex tasks on-the-job, at the point of need whilst live in the application, where up to 70% of learning happens. Increased retention means more proficient users.

Bolster Effectiveness of Change Programs

Train more users, more effectively, and in less time with in-application guidance to support your change and communication programs.

Improve Collaboration with Workflow Management

Built in workflow manages projects, teams, tasks and content. Operational analytics help understand the health of your digital adoption efforts.

Cloud-Based Digital Adoption

No need for on-premise hardware, desktop components or maintenance and support contracts. SaaS makes everything easier.

Utilisation Reporting

Monitor user activity, enabling you to evaluate how the content has been utilised.

Single Source Editing

From a single recording file, generate multiple output types. Edit one file and updates are automatically deployed to all associated assets.

Distributed Authoring

Leverage application SMEs for recording application tasks in which they are expert.

Modern, Intuitive User Interface

A clean and simple UI makes Opus simple and easy to use for admins, recorders/SMEs, editors and end users.

SCORM and xAPI Compliant

Opus works with your LMS, helping to enhance existing L&D efforts plus add Opus user activity to your xAPI learning repository.

Backup and Disaster Recovery

Ensure business continuity with built-in backup and disaster recovery that comes as a natural aspect of SaaS.

About Larmer Brown

Larmer Brown has been delivering learning solutions for more than three decades, supporting clients with their learning initiatives and training programmes using a variety of content development tools, both on-premise and in the cloud. Our primary objective is to help organisations realise the desired business benefit from their software through the implementation of content development and training delivery programs.

We are a Reseller and Services Partner for Epilogue Systems, offering their cloud-based Opus digital adoption solution to support our clients' implementation programs. Our services and support ensure that you achieve maximum benefit from your investment. This includes consultancy, training, content development, implementation and technical support, as well as a Discovery Workshop which gets you up and running fast.
